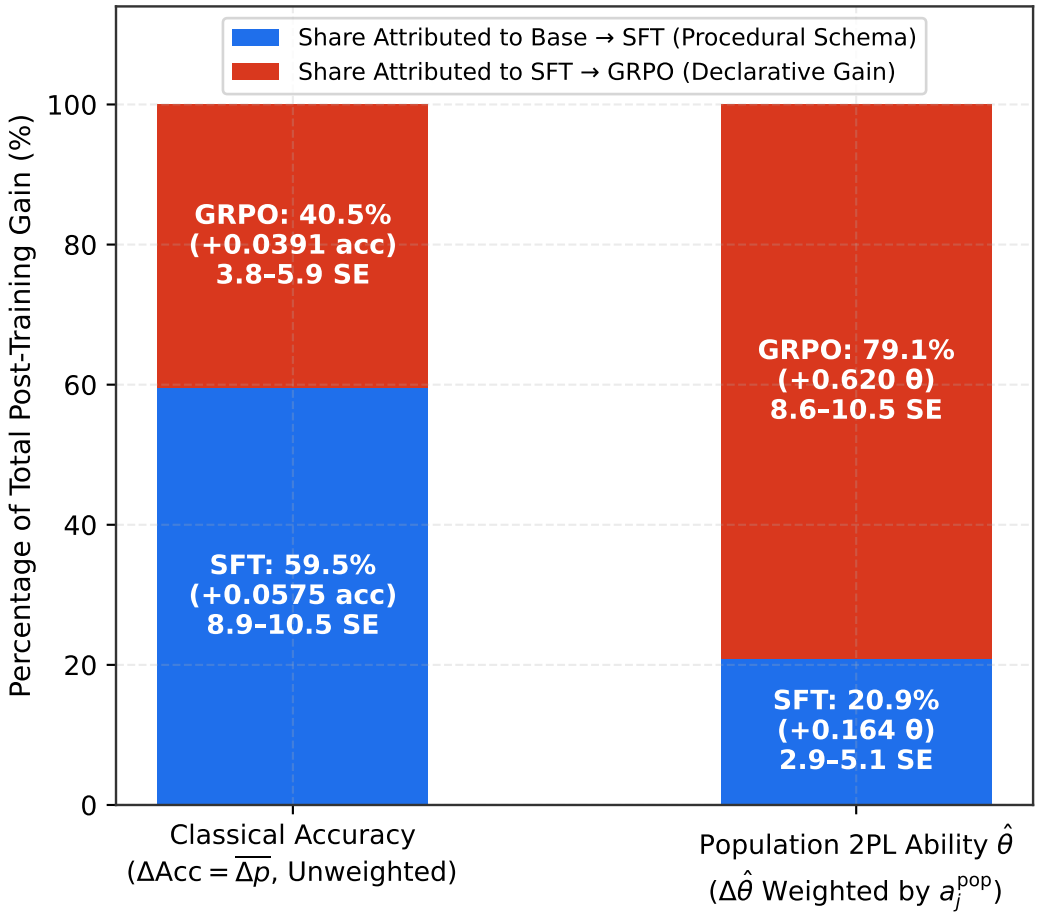
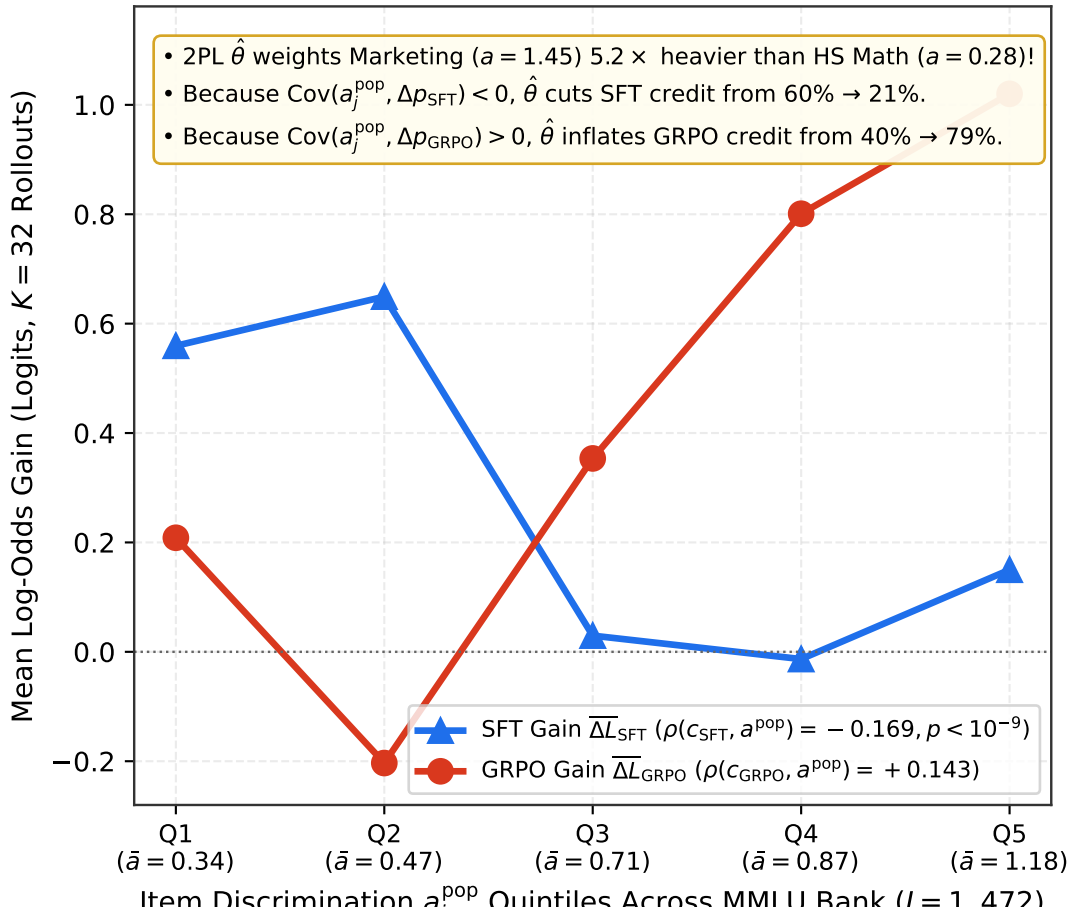
CAN #2 (B Helps A, Theorem 1): How Item Discrimination a_j^{pop} Explains the 60%/40% vs. 21%/79% Attribution Reversal

A. The Attribution Reversal: 60% / 40% (Acc) vs. 21% / 79% (2PL $\hat{\theta}$)





B. Mathematical Mechanism: $\Delta\hat{\theta} \propto \overline{\Delta p} + \text{Cov}(a_j^{\text{pop}}, \Delta p_j)/\bar{a}^{\text{pop}}$
